TO : Chief, Electronics Division, OSI
FROM : Chief Instructor, Proposed course on [redacted]
[redacted] ELINT information [redacted]

SUBJECT: Contributions requested for the course from the Electronics Division

1. At the close of our meeting on 22 July 1959, you asked me to list for you the men needed for instruction in the new ELINT course, the purposes for which they were needed, and the probable number of hours during which they would be engaged. This letter is an answer to that request.

2. There are two areas on which we are agreed that OSI and only OSI can and should supply information and instruction:

a. Targets: The Geographical Area, ONR, has prepared for the course a base map on which specific targets should be set, preferably by an overlay. It would be the responsibility of the Electronics Division to indicate these targets and later to explain them to the students. One specialist-- [redacted] name has been suggested-- is needed for this task. Roughly estimated the time involved is three hours of preparation and consultation; fifty minutes allotted for explanation and discussion.

b. ELINT Analysis, Evaluation, and Interpretation: [redacted] has already agreed to prepare three hours of lecture and demonstration: an hour for introducing the subject with the appropriate records; an hour devoted to a tour of the laboratory; and an hour for the two last phases, evaluation and interpretation. Mr. [redacted] will have the outline of his lecture ready by this Friday, 24 July 1959.

3. You suggested also that representatives of the Electronics Division should explain to the students the intelligence that OSI has been able to derive from the collection of electronic signals from (1) radar systems of all types; (2) missiles and space vehicles; (3) research and development laboratories and electronic plants. You proposed that [redacted] discuss the intelligence derived from radar signals, [redacted]

4. I think that these three presentations would be a valuable addition to the course and that they should have a separate three hours allotted to them. I would suggest a panel of three; each man to talk fifty minutes. Since each of the speakers would be an expert in his field and fully aware of all developments, there should be no difficulty in the collection of material. You would be the judge of the amount of time required in preparation.
